

Chromebook Quick Start Guide

HCPSS Chromebooks will automatically join the Wi-Fi at HCPSS locations. Chromebooks can also connect to other non-HCPSS wireless networks using the directions and best practices below.

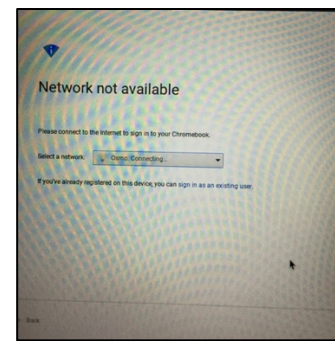

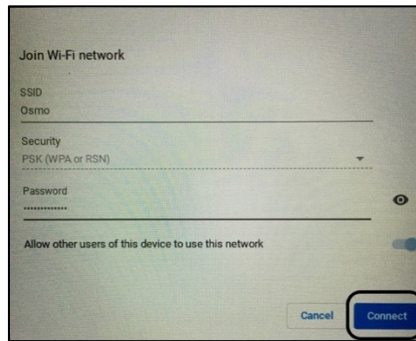

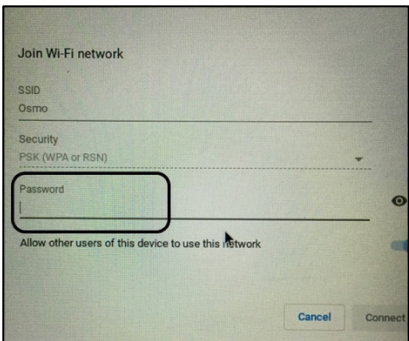

Connecting to a Wi-Fi Network

1. Turn on the Chromebook. On the **Network not available** window, click on the **Select a network** drop down menu and click on the name of the desired network.

2. On the **Join Wi-Fi network** window confirm the desired network's name is listed under **SSID**. The Chromebook will automatically list a security type under the **Security** heading. Type the password for the network under the **Password** heading and press **Connect** in the lower right corner. Upon successful password entry, the Chromebook will connect to the Wi-Fi network.

Warning: Joining unsecured Wi-Fi networks, or networks without passwords, may allow attackers to intercept your private information

3. Continue to login by pressing **NEXT**.

Need Help with a Chromebook?

1. Contact your school's Library Media Specialist (<https://www.hcpss.org/schools/#direct>). The school-based staff member will coordinate support.

Need Help with Your HCPSS Account?

Visit <https://account.hcpss.org> for additional user account assistance.

You can:

- Reset your password
- Receive a username reminder
- Change the email address used for recovery

All account services use the personal email address on-file with the school system.
